AMBUTRAK

When missing inventory is not an option!

AMBUTRAK

EMS Inventory Management Solution

Executive Summary

EMS Technology Solutions, LLC is the provider of AmbuTRAK, EMS industry specific Inventory Management Software. Released in 2007, AmbuTRAK follows the Software as a Service (SaaS) model to minimize the traditional costs and risks associated with software acquisition, deployment and maintenance.

EMS Agencies, Fire Departments and Hospitals are using AmbuTRAK Inventory Management Software to centrally manage and report on the movement of supplies and assets within their organization. The improved inventory control provides them operational efficiencies, reductions in ordering costs, control of inventory expenditures, reduced inventory carrying costs and fewer vehicle and equipment service interruptions.

AmbuTRAK's first class reporting system provides both canned and custom reports. These reports can be run on a schedule and emailed directly to anyone in the organization. This great feature provides non system users with timely management reports without having to login to the AmbuTRAK software.

AmbuTRAK is hosted centrally and delivers access to multiple users over the Internet. There is no software installed on the local pc. AmbuTRAK requires you to have an Internet connection and a standard web browser, preferably Internet Explorer 7.0 or higher for best performance.

Software maintenance and updates are performed regularly during off hours with minimal to no impact on business operations. Application Data is backed up daily and is readily accessible to restore the system in the event of an emergency.

Sales and Support staff are available to assist you with application questions. There is virtually no burden on your IT Staff to run AmbuTRAK software.

EMS Inventory Management Solution

Proposed Software and Computing Environment

EMS Technology Solutions, LLC is the provider of AmbuTRAK, EMS industry specific inventory management software. Released in 2007, AmbuTRAK follows the Software as a Service (SaaS) model to minimize the traditional costs and risks associated with software acquisition, deployment and maintenance.

The AmbuTRAK Software has three distinct components:

Module	Function
Backoffice	Inventory Management and Software Administration
Crew Interface	Electronic Check Sheet for Inspections, Unit/Station Inventory, and Supply Requests
Mobile Scanner	Inventory Management Functions in a Mobile Environment

AmbuTRAK supports Manual and Barcode operations.

AmbuTRAK Software Backoffice

Crew Management
Controls access to the AmbuTRAK application via user name and password and defines the Role of each user. There are four roles a user can take in the application; user, supervisor, supply manager, and admin. Each role comes with additional access to the software's applications and reporting. Supply Managers and Supervisors can be further restricted by their assigned supply rooms.

Inventory Management
Multiple Inventory Management applications are included in the AmbuTRAK software to provide flexibility while supporting the unique needs of the EMS market. Each application provides for the ability to manual update inventory records or to scan a UPC for more accurate entry.

Application	Description
Receive Inventory	Supply Room Inventory Management Application
Receive Purchase Orders	Supply Room Inventory Management Application
Fill Unit Requests	Manages Supply Requests from Crew Interface
Issue Inventory	Allows Supplies to be provided w/out a Unit Requests
Transfer Inventory	Moves Supplies from a Unit or between Supply Rooms
Check Out/In Fixed Assets	Manages the Checkout and Return of Fixed Assets

Asset Management
Asset Manger provides records management for fixed assets. Track preventative maintenance schedules, preventative maintenance history and total cost of ownership for your assets. Documents and images can be attached and uploaded to each maintenance record, providing an electronic filing cabinet for later review.

Check Out/In assets to your crew members and vehicles to track accountability for each company asset.

AMBUTRAK

EMS Inventory Management Solution

Purchase Order Management
Generate Purchase Orders for your Supply Rooms based on supply reorder points and maximum stock levels. Email Purchase Orders directly to suppliers from AmbuTRAK. Generate a .pdf of Purchase Orders for printing or faxing. Receive inventory against purchase orders to further improve operation efficiency.

Reporting
Standard Reports are provided with the AmbuTRAK software to assist you in getting to know your supply inventory and fixed assets. Each of these reports can be further customized to meet the needs of your operation. Additional reports are easily created in the report manager. Some key features of the custom reporting include: Field Management, Data Filters, Summaries, Charts, Graphs, Scheduled Emails, and multiple formats (.csv, .xls, .pdf, .doc).

Reports are easily created or modified to provide you the information needed to manage your operation. No special skills required.

Barcode Printing
Generate and print Barcodes by Category, Subcategory, Part Type or UPC for improved data accuracy when performing inventory management functions.

Barcodes can be printed on Avery labels with a standard laser or inkjet printer. For improved barcode printing you can choose to purchase the optional Barcode Printer which is a roll fed label printer that prints using a wax/resin thermal transfer process for added label durability and ease of use.

AmbuTRAK Software Crew Interface

Crew Interface – Electronic Check Sheet
Designed for use on a touch screen notebook pc, this application enables crew members to perform Unit Inspections and Inventory Checks. The Crew Interface will send a notification based on triggers set up in the Unit Inspection Questionnaires; and provides the method for submitting Unit Supply Requests to the Supply Room. Crew members can check the status of their Supply Requests

Expiration Dates for medications are tracked by the Crew Interface. This enables quick reporting to find close dates medications once they leave the control of the supply room.

Sealed Cabinets can be setup and quickly verified in the Crew Interface to reduce the time required to prepare a Unit for service.

Supplies can be noted by call or run number for added accountability for supply usage.

Unit Inspections Questionnaires
Configurable questionnaires allow you to perform Unit Inspections and report incidences directly to supervisors via email or through custom reports. Questions may be multiple choices and set to trigger notifications or free text. Notifications can be routed via email to anyone in your organization.

AMBUTRAK

EMS Inventory Management Solution

AmbuTRAK Software Mobile Scanner

Mobile Scanner Application
Optional application for services requiring mobility when performing Inventory Management operations. Requires wireless connection to the internet.

Multiple Inventory Management applications are included on the AmbuTRAK software to provide flexibility while supporting the unique needs of the EMS market. Each application provides for the ability to manual update inventory records or to scan a UPC for more accurate entry.

Application	Description
Receive Inventory	Receive Inventory in to the Supply Room
Receive Purchase Orders	Receive Inventory in to the Supply Room by PO
Fill Unit Requests	Manage Supply Requests from Crew Cheek Sheet
Issue Inventory	Provide Supplies to a Unit w/out a Unit Request
Transfer Inventory	Move Supplies between Supply Locations
Check Out/In Fixed Assets	Manage the Checkout and Return of Fixed Assets
Cycle Counting	Verify and Update Stock Quantities

Technology Architecture - Software as a Service

AmbuTRAK is hosted centrally and delivers access to multiple users over the Internet. There is no software installed on the local pc. AmbuTRAK requires you to have an Internet connection and a standard web browser, preferably Internet Explorer 7.0 or higher for best performance.

Software maintenance and updates are performed regularly during off hours with minimal to no impact on business operations. Application Data is backed up daily and is readily accessible to restore the system in the event of an emergency.

Sales and Support staff are available to assist you with application questions. There is virtually no burden on your IT Staff to run AmbuTRAK software.

Hosting Environment
EMS Technology Solutions, LLC has chosen Rackspace for enterprise-level hosting services. Rackspace's Fanatical Support has made them a leader in application hosting receiving Microsoft's Hosting Provider of the Year Award in 2003, 2005 and 2007. Additional Information of Rackspace may be provided upon request.

Local Environment
Network Requirements: Minimal (Stable Connection to the Internet), Optimal (T1), Recommended (T1)

Client Operating Systems: Windows XP, Vista

AMBUTRAK

EMS Inventory Management Solution

Bar Code Scanning Hardware (optional)

Mobile Scanner	For Mobile Scanner Application (optional)
USB Barcode Scanner	To Scan Barcodes (optional)
Bluetooth Scanner	To Scan Barcodes (optional)
Barcode Printer	To Print Barcodes (optional)

Implementation Plan Outline

The AmbuTRAK team will assist you in the implementation of your inventory management system. To get started we will request the following information:

- Company Logo in .jpg format – used to brand your AmbuTRAK install
- Crew Member List – we can upload your crew members directly in to AmbuTRAK
- Parts List in .xls or .csv format – we will import your parts and help you get the data ready for use
    - o You can send us an export from you current inventory system
    - o You can request a file from your suppliers
- Copy of your current paper Check Sheet – we will use to help you create Supply Cabinets, Units and Questionnaires

Week 1 – Introduction and Planning with Supply Managers
- Discuss current and proposed inventory management controls
- Review AmbuTRAK Inventory Management System Features
- Outline data requirements (Parts, Suppliers, Units, Checklists, Supply Rooms)
- Establish process for gathering and loading data in to the inventory system

Week 2 - Establish AmbuTRAK Instance (AmbuTRAK Team)
- Load part data provided by Supply Manager
- Review data for completeness
- Outline any additional data requirements

Week 3 - Train Supply Managers / Crew Members
- Create test environment with actual data
- Train Supply Managers on the Backoffice and Mobile Scanner Interface
- Train Crew Members on the Crew Interface

Week 4 - Complete Testing and Begin Live Use
- Begin using AmbuTRAK to manage supplies in supply room
- Scale to vehicle and/or station inventory management

Ongoing – Maintain Software and User Environment
- Provide ongoing support for users
- Provide additional training as requested
- Provide software maintenance
- Provide software upgrades

AMBUTRAK

EMS Inventory Management Solution

Scope of Services

EMS Technology Solutions will provide full access to the AmbuTRAK Inventory Management Software as outlined in this document.

EMS Technology Solutions will provide software setup and training per the agreement.

EMS Technology Solutions will provide application hosting as well as database backups of AmbuTRAK on our high performance Rackspace servers.

EMS Technology Solutions will provide support and value added upgrades to keep your AmbuTRAK software up to the most current version at no additional cost.

Technical support will be provided at no additional cost.

This proposal does not include any hardware. Barcode scanners will be quoted separately based on your needs. USB Scanner, Blue Tooth Scanners and PC Mobile Scanners are available.

Your data is securely backed up by EMS Technology Solutions and Rackspace daily. EMS Technology Solutions can provide you access to a backup of your database via secure FTP upon request. The access will require that you pull the database to your local server as there is no process to push data on a schedule. EMS Technology Solutions may restrict access to transferring these files to non peak hours to avoid any potential service interruptions for other customers.

If your agreement for Ambutrak service is terminated for any reason you will be provided access to a backup of your database. We will also assist you in the transfer of that data to your servers if necessary. EMS Technology Solutions will also retain a copy of your data for up to 1 year from date of termination.

If you plan to warehouse your data for other uses, you may find that scheduling a series of snapshot reports within the AmbuTRAK software will provide you a great method for automated information delivery. These reports can be delivered in an .xls or .csv format for easy import in to other systems and databases.

Support Services

Support is available via phone 877-217-3707 during business hours M-F 8 – 7 EST, and via email support@ambutrak.com 24/7/365. Online knowledge base is also provided and accessed directly from the application.

EMS Inventory Management Solution

Terms of Agreement

1. EMS Technology Solutions, LLC will provide AmbuTRAK Inventory Management Software as outlined in the SOW.

2. Scope of License: The AmbuTRAK software is licensed for the sole use of KEY LARGO EMS and may not be installed or used at greater than the number of purchased licenses indicted in this agreement.

3. A software license is defined as any inventoried location outside of a supply room, where inventory takes place using the Crew Interface. Ie. Vehicle, Station, Disaster Trailer.

4. Software set-up fee includes 2 hours of online administrator training and supply parts upload. Additional onsite training will be provided at your request. If onsite training is requested, the fee will be $900 per day.

5. Application Hosting, Maintenance and Upgrade fees are included in the monthly subscription price.

6. Payment shall be made as follows: Setup, training and hardware fees are due upon signing of this agreement. The initial monthly software license fee is due within 30 days of the software installation. Additional monthly licenses maybe ordered at the same rate quoted in this agreement.

7. Confidentiality: KEY LARGO EMS and any agents or contractors of KEY LARGO EMS will maintain the confidentiality of the EMS Technology Solutions, LLC source materials and all other sensitive information regarding software functionality and the terms of this agreement.

8. Termination: Either party may terminate this agreement by providing the other party 30 days notice.

9. Hardware: Unless listed above, this quote does not include any hardware cost. EMS Technology Solutions, LLC is an authorized reseller of Psion Teklogix scanners and can provide a separate quote upon request.

10. Expiration: Agreement expires if not signed and received within 45 days from the date on this quote.

Acceptance of Agreement

The person signing below represents and warrants that she or he has the authority to bind KEY LARGO EMS to the terms of this agreement.

Our signatures below indicate our agreement with the terms of this contract.

AmbuTRAK Inventory Software

AmbuTRAK is the only Inventory Management software designed specifically for the demands of the Emergency Medical Services Industry. Its unique processes set it apart from standard warehouse inventory software, making it the #1 choice for inventory control in the industry. Its scalability and low cost of ownership make realizing a return on investment easy.

Why You Want AmbuTRAK Inventory Management Software.

- **Organization** -With AmbuTRAK software, you have the ability to instantly create reports on how your inventory relates to business functions. AmbuTRAK contains valuable reporting features on the data collected and how it can relate to your business.
- **Time Saver** - Barcode scanning decreases actual inventory time by more than half. The American recognized standard is that each paper based transaction takes approximately 7 seconds. ROI determination is that barcode scanning of the same transaction improves the labor efficiency by 60-70% and a mean transaction time of 2.1 seconds. During a manual inventory, papers can get lost or damaged, items miscounted, not to mention illegible handwriting. Time is crucial in this field!
- **User Error Eliminated** - With AmbuTRAK, inventory data collected is automatically uploaded to your database. By automating your inventory process, data entry errors are nearly eliminated. During the inventory process workers can often make mistakes reading, misreading, and hand writing inventory data. In addition, errors are often made entering hand written data manually into a database or excel spreadsheet.
- **Expiration Dates Tracked** - With AmbuTRAK you not only save money by rotating stock, but you can also save money by sending items with expiration dates back to your supply vendor for a full or partial credit. AmbuTRAK provides the peace of mind that critical items are never expired.
- **Just In Time Ordering** - Place an order in less than one minute. AmbuTRAK provides you automated notification of when to order and how much to order. No more manual counting or overstock, knowing an accurate usage history allows you to set par levels for what you need.
- **Track Fixed Assets** - AmbuTRAK not only tracks your supply room inventory, it tracks each of your fixed assets and their preventative maintenance schedules.
- **Check In Check Out** - Save money by making sure items that have been issued are returned. AmbuTRAK's Check In-Out Manager provides you with the ability to electronically assign items to an employee (Check Out) and then Check Items Back in at a later time (Check In).

AMBUTRAK ARCHITECTURE

AmbuTRAK is a Managed Web Application (why does this matter)

Because AmbuTRAK is web-based, there are no expensive hardware packages to purchase. All that's needed is an internet connection and an optional barcode scanner ($150.00). Your AmbuTRAK subscription is based on the number of vehicles in your fleet providing the right fit for any size operation. The basic subscription includes all the application technology, software maintenance, support and training.

AmbuTRAK Inventory Management Software is made up of three distinct components. The easy to use Crew Member Interface benefits emergency personnel working in the field within ambulances, fire rescue vehicles or surveying disaster trailers. The Back Office Administration Suite services the office employees, responsible for ordering and tracking all emergency supplies and reporting on business performance. The Mobile Scanner Application supports operations that seek mobility when receiving or issuing supplies.

Crew Member Interface

The simple, easy to use program works like this. Fire, Ambulance or Disaster Management workers log in to the web-based application and conduct inventory of all supplies on board. AmbuTRAK automatically sends a request to the back office for any equipment that needs restocking, allowing for orders to be filled immediately. This electronic tracking and recording system eliminates time-consuming paper check sheets and makes workers accountable for the supplies and equipment. Because AmbuTRAK reports show usage, supply cost, serial numbers and expiration dates - EMS companies know their inventory is always up to date and more importantly, not going to waste.

Back Office Administration Suite

In the back office, employees using AmbuTRAK know exactly what supplies are on the storeroom shelves and how much inventory is actually being used. This can reduce overall inventory by up to 30% and cut down on overstocking. When supplies run low, AmbuTRAK automatically sends alerts in time for more inventory to be ordered and shelves restocked. A powerful reporting engine provides management personal with both standardized and custom reports to improve their operational efficiency.
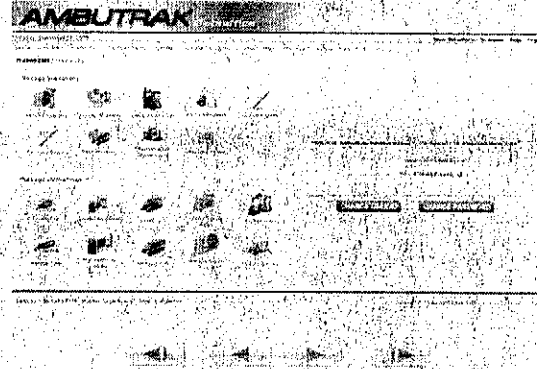

Mobile Scanner Application

The Mobile Scanner Application performs many of the back office functions while releasing the user from the desktop computer. A simple wireless connection is all that is needed to perform inventory operations in the supply room. Streamlined workflows further improve the operational efficiency when using the mobile scanner.

AmbuTRAK Inventory Software

AmbuTRAK is the only Inventory Management software designed specifically for the demands of the Emergency Medical Services Industry. Its unique processes set it apart from standard warehouse inventory software, making it the #1 choice for inventory control in the industry. Its scalability and low cost of ownership make realizing a return on investment easy.

Ambulance Services

Ambulance Services of all sizes are finding AmbuTRAK Inventory Management Software a huge asset to their operation. It greatly reduces the time spent restocking Ambulance Supplies while providing complete control over supply room par levels and supply room ordering.

Fire Departments

Fire Stations seeking to improve their Asset Management and reduce costs associated with their Station Supplies are turning to electronic inventory management for help. AmbuTRAK Inventory Management Software provides the necessary accountability and asset management required to successfully reduce costs for a single Fire Station or a large Fire Department with multiple station locations.

Disaster Management Services

Awareness and control best describe AmbuTRAK implementations for Disaster Management Services. AmbuTRAK Inventory Management helps organizations be prepared by providing exact inventory positions for all remote sites and information when inventory checks need performed. If a disaster occurs, AmbuTRAK can also be used to issue and Track the deployment of Assets to volunteers.

How to Buy

To purchase AmbuTRAK, please contact us at **#877-217-3707**, or email us at info@ambutrak.com for detailed pricing specific to your needs.

"Missing Inventory is Not an Option"

- Shane Garrison, **Vice-President, Puckett EMS**

During these tight economic times, trimming costs and streamlining operations can mean the difference between needed profits and unnecessary losses. One of the best ways to add dollars to your bottom line may be simply having a manageable and understandable inventory control process.

Most EMS agencies only realize what their expenses are when it comes to inventory. Out of necessity many EMS agencies are now being forced to do what other industries have done for years, "provide more with less". By implementing LEAN manufacturing processes coupled with electronic inventory software management, agencies are seeing 40-50% decreases in inventory costs.

One of the leaders in providing an EMS specific inventory management software solution is EMS Technology Solutions (ETS). ETS was contracted in 2005 to build a customized solution for Puckett EMS, based in Austell, Georgia. In 2007, ETS released **AmbuTRAK**, a web based inventory management solution designed for Fire and EMS agencies. *"Puckett EMS started getting calls from other agencies that wanted a solution that would work for them and was affordable to use, so we started working on a web based solution that met the needs of what agencies needed"*, says ETS President Shane Garrison, *"I think the thing that appeals to most users of the* **AmbuTRAK** *solution is that it's so easy to use. As a general rule, inventory software has always been really difficult to manage and very expensive to implement. For most EMS agencies they can't afford to spend thousands of dollars on expensive software and hardware and smaller agencies never could afford the implementation cost. That's the beauty of* **AmbuTRAK***, because its web-based software, most people already have the hardware that they need. The software is based off of the total number of licenses you require. Our smallest customer has 3 ambulances and our largest customer has 110 ambulances."*

Since the first software license sold back in 2007, not one customer has been lost. They have over 800 licenses and forecast a double in size for 2009. *"We are fanatical about the service we provide our customers. Our technical support team is amazing, they know how important each and every customer is and they go out of their way to make sure that they are happy with the software. I make sure each customer has my direct line and cell phone number, if they don't feel like they're being taken care of by our support team, I want them to know that they can always call me directly and I'll make sure that they are taken care of."*

Besides providing a robust supply room management feature that includes bar code scanning and purchase order management, **AmbuTRAK** also provides a Fixed Asset Manager and a Check In-Check Out Manager. *"We provide much more than just standard warehouse inventory management software"*, says Garrison, *"**AmbuTRAK** provides solutions that are common for this specific industry. Our customers shape the software based on what they need, their feedback is critical to making sure we're always on the cutting edge."*

Since they started selling the **AmbuTRAK** solution, ETS has never required any of its customers to sign an upfront payment schedule. Customers pay as they go each month. Their philosophy is that if they are providing quality software, coupled with great customer service and affordable prices, customers will stay.
